NF-e Electronic invoice;
Legal advice on digital certification

The Digital Certification

It is a set of techniques and processes that offer greater security to communications and electronic transactions, also allowing the safe custody of documents.

Using the Digital Certification, it is possible, for example, to prevent hackers from intercepting or tampering with communication by the Internet. It is also possible to know with certainty who was author of a transaction or a message, or even keep confidential data protected against reading by unauthorized people. With the advent of **medida provisória Nº 2200-2 of August 24, 2001** it is now possible to use electronic documents with legal validity.
